MASTER'S PROGRAM

IMMUNE RESPONSE

Open Your Mind Seminar

Friday, Nov 20 2020

1.30 pm – 3 pm

Online (Microsoft TEAMS)

The 2 sides of the immune response to Cov-2 SARS

The Covid-2 pandemic caused the death of more than 30,000 people in France. An acute respiratory distress syndrome is most often the cause. This is the result of a defect in the production of type 1 interferons, an early and effective effector of antiviral immunity associated with the induction of hyperinflammation ("cytokine storm") and a partially defective adaptive T immune response. Mechanisms will be discussed as well as therapeutic potentials.

Alain FISCHER

Collège de France, Hôpital Necker
